

# PACKAGING

Ref: 101-0160	Cont.: 20 x 2 mL
Ref: 101-0226	Cont.: 10 x 10 mL

Store at 2-8° C

# CLINICAL SIGNIFICANCE

Gamma-glutamyl transferase ( $\gamma$ -GT) is a cellular enzyme with wide tissue distribution in the body, primarily in the kidney, pancreas, liver and prostate. Measurements of gamma-glutamyl transferase ( $\gamma$ -GT) activity are used in the diagnosis and treatment of hepatobiliary diseases such biliary obstruction, cirrhosis or liver tumours<sup>1,2,5,6</sup>.

Clinical diagnosis should not be made on a single test result; it should integrate clinical and other laboratory data.

### PRINCIPLE OF THE METHOD

Gamma-glutamyl transferase ( $\gamma$ -GT) catalyses the transfer of  $\gamma$ -glutamyl group from  $\gamma$ -glutamyl-p-nitroanilide to acceptor glycylglycine, according to the following reaction:

 $\gamma$ -L-Glutamyl-3-carboxy-4-nitroanilide + Glycylglycine  $\xrightarrow{\gamma-GT}$  $\gamma$ -L-Glutamyl-glycylglycine + 2-Nitro-5-aminobenzoic acid

The rate of 2-nitro-5-aminobenzoic acid formation, measured photometrically, is proportional to the catalytic concentration of  $\gamma$ -GT present in the sample<sup>1,2</sup>.

# REAGENTS

<b>R 1</b> Buffer	TRIS pH 8.25	100 mmol/L
R 2	Glycylglycine	100 mmol/L
Substrate	L- γ-glutamyl-3-carboxy-4-nitroanilide	3 mmol/L

**Optional (not included in the kit)** 

Contro-N	Ref.: 101-0252	4 x 5 mL	Lyophilized human	
Contro-IN	Ref.: 101-0083	20 x 5 mL	control serum	
Contro-P	Ref.: 101-0253		Lyophilized human	
	Ref.: 101-0084	20 x 5 mL	control serum	

# PREPARATION

Working reagent (WR):

Ref: 101-0160

Dissolve one tablet of R 2 Substrate in one vial of R 1 Buffer. Ref: 101-0226, 101-0221, 101-0454

Dissolve the contents of R 2 Substrate in the corresponding volume of R 1 Buffer.

Cap and mix gently to dissolve contents.

Stability: 21 days at 2-8° C or 5 days at room temperature (15-25°C).

# STORAGE AND STABILITY

All the components of the kit are stable until the expiration date on the label when stored tightly closed at 2-8° C, protected from light and contaminations prevented during their use.

Do not use the tablets if appears broken.

Do not use reagents over the expiration date.

# Signs of reagent deterioration:

- Presence of particles and turbidity.

- Blank absorbance (A) at 405 nm  $\ge$  1.20.

#### ADDITIONAL EQUIPMENT

- Spectrophotometer or colorimeter measuring at 405 nm.
- Thermostatic bath at 25° C, 30° C o 37° C ( $\pm 0.1^{\circ}$  C)
- Matched cuvettes 1.0 cm light path.
- General laboratory equipment.

# SAMPLES

Serum<sup>1</sup>.  $\gamma$ -GT is stable for at least 3 days at 2-8° C, 8 hours at 15-25° C and 1 month at – 20° C.

# PROCEDURE

**Notes:** CHRONOLAB SYSTEMS has instruction sheets for several automatic analyzers. Instructions for many of them are available on request.

1. Assay conditions:

2. Adjust the instrument to zero with distilled water or air.

3. Pipette into a cuvette:

WR (mL)	1.0
Sample (µL)	100

- 4. Mix, wait for 1 minute.
- 5. Read initial absorbance (A) of the sample, start the stopwatch and read absorbances at 1 minute intervals thereafter for 3 minutes.
- 6. Calculate the difference between absorbances and the average absorbance differences per minute ( $\Delta A$ /min).

## CALCULATIONS

 $\Delta A/min \ge 1190 = U/L \text{ of } \gamma$ -GT

**Units:** One international unit (IU) is the amount of enzyme that transforms 1  $\mu$ mol of substrate per minute, in standard conditions. The concentration is expressed in units per litre of sample (U/L).

### **Temperature conversion factors**

To correct results to other temperatures multiply by:

Assay	Conversion factor to			
temperature	25° C	30° C	37° C	
25° C	1.00	1.37	1.79	
30° C	0.73	1.00	1.30	
37° C	0.56	0.77	1.00	

#### **QUALITY CONTROL**

Control sera are recommended to monitor the performance of assay procedures.

If control values are found outside the defined range, check the instrument, reagents and technique for problems.

Each laboratory should establish its own Quality Control scheme and corrective actions if controls do not meet the acceptable tolerances.

#### **REFERENCE VALUES<sup>1</sup>**

	25° C	30° C	37° C
Women	4 - 18 U/L	5 - 25 U/L	7 - 32 U/L
Men	6 - 28 U/L	8 - 38 U/L	11 - 50 U/L

These values are for orientation purpose; each laboratory should establish its own reference range.

### PERFORMANCE CHARACTERISTICS

**Measuring range:** From detection limit of 0.000 U/L to linearity limit of 375 U/L.

CE

If the results obtained were greater than linearity limit, dilute the sample 1/2 with NaCl (9 g/L) and multiply the result by 2.

#### **Precision:**

	Intra-assay (n=20)		Inter-assay (n=20)	
Mean (U/L)	40.0	199	41.6	200
SD	0.33	1.20	0.80	2.29
CV (%)	0.83	0.61	1.91	1.15

Sensitivity: 1 U/L =  $0.0008 \Delta A/min$ .

Accuracy: Results obtained using CHRONOLAB reagents (y) did not show systematic differences when compared with other commercial reagents (x).

The results obtained using 50 samples were the following:

Correlation coefficient (r): 0.999

Regression equation: y = 1.2253x - 2.0435.

The results of the performance characteristics depend on the analyzer used.

### **INTERFERENCES**

Plasma should not be used, anticoagulants inhibit the enzyme. Gross haemolysis interferes in the assay<sup>1</sup>. A list of drugs and other interfering substances with  $\gamma$  -GT determination has been reported<sup>3,4</sup>.
